The Baltimore College of Dental Surgery.
Chartered by the Legislature of Maryland in 1839.

The Oldest Dental College in the World.

FACULTY.

RICHARD B. WINDER, M. D., D. D. S., Professor of Dental Surgery and Operative Dentistry.

M. WHILLIDIN FOSTER, M. D., D. D. S., Professor of Therapeutics and Pathology.

WM. B. FINNEY, D. D. S., Professor of Dental Mechanism and Metallurgy.

B. HOLLY SMITH, M. D., D. D. S., Professor of Special Anatomy and Dental Materia Medica.

THOMAS S. LATIMER, M. D., Professor of Physiology and Comparative Anatomy.

WILLIAM SIMON, Ph. D., M. D., Lecturer on Chemistry.

CHARLES F. BEVAN, M. D., Clinical Professor of Oral Surgery.

J. W. CHAMBERS, M. D., Professor of Anatomy.

GEORGE H. ROHÉ, M. D., Professor of Materia Medica.

LECTURERS.

WM. F. SMITH, A. B., M. D., Regional Anatomy.

JOHN H. MEYER, D. D. S., Continuous Gum.

DR. GEORGE EVANS, Crown and Bridge-work.

DR. K. C. GIBSON, Artificial Palates and Fractured Maxillaries.

CLINICAL INSTRUCTORS.

CORYDON PALMER, D. D. S..............Ohio
E. PARMELY BROWN, D. D. S..............N. Y
A. L. NORTHROP, D. D. S..............N. Y
E. L. HUNTER, D. D. S..............N. C
W. W. WALKER, D. D. S..............N. Y

DEMONSTRATORS.

Assistant Demonstrators.

W. W. DUNBRACCO, D. D. S.............J. E. ORRISON, D. D. S
G. MARSHALL SMITH, D. D. S.............W. S. TWINLEY, D. D. S

W. F. SMITH, A. B., M. D., Demonstrator of Anatomy.

LOUIS F. ANKRIM, M. D., Assistant Demonstrator of Anatomy.

R. G. DAVIS, M. D., Assistant Demonstrator of Anatomy.

The Fifty-fourth Annual Session will commence on the 1st of October, 1893, and continue until March 20th, 1894.

The Infirmary is open during the entire year for Dental Operations. Students corresponding with the Dean will please be careful to give full address, and direct their letters to

PROF. R. B. WINDER, DEAN,

No. 716 Park Avenue, Baltimore, Md.
BOARD OF VISITORS.

The following Board of Visitors have been appointed by the Faculty. This Board holds Annual Meetings and appoints every year a Committee from its Members to attend the final examinations of the Graduating Class and advise with the Faculty as to the qualifications of candidates for the Degree of Doctor of Dental Surgery.

From this Board there will also be selected, each year, a number of gentlemen who shall hold Clinics and deliver Clinical Lectures during the Collegiate term.

The members of the State Board of Dental Examiners are also invited to be present.

ANNOUNCEMENT.
1893-1894.

The Fifty-Fourth Regular Course of Instruction in the Baltimore College of Dental Surgery will begin on October 1st, 1893, and continue until March 20th, 1894.

The oldest of Dental Colleges, this Institution enters on the fifty-fourth year of its career with its prospects for usefulness brighter than ever before. It has added to its Faculty and Clinical Corps strong and active men, and is better equipped than at any period of its existence. It makes no special claim to the consideration of the dental profession and public, aside from its actual worth as an instructor of young men in a specialty, and claims only the modest place of aiding in developing, with others, (what it did for so many years alone and opposed,) a single science and art. The results of its work in these fifty-three years are world-wide in their influence upon dentistry.

Sixteen hundred and eighty nine (1689) graduates have gone from this College into practice, and these are scattered all over the civilized world. They are located in nearly every city of Europe. They lead the profession in all the great centres of civilization, and have won eminence in England, France, Russia, Prussia, Switzerland, Spain and Italy. They have carried the honors of the institution into Asia, Australia, and the land of the pyramids, while in every State in the United States they have established their own worth and the reputation of their Alma Mater.

The College may well point with pride to the standing of its graduates. Many of them have reached high stations in the profession; many have become renowned for their attainments, original discoveries and writings. They have met with signal honor abroad, nearly every court dentist in Europe being a graduate of this institution. Very many of them are men of broad culture, who had been previously trained in other high educational institutions, and, collectively, they have developed a degree of worth and usefulness which reflect the highest credit upon the College.

Three thousand three hundred and twenty-one (3321) students have matriculated at this college.

The course of study, in addition to the regular lectures, embraces daily clinics in the College Infirmary and demonstrations in the College Laboratory, by the Professors and Demonstrators. The practical course of study runs through the entire year, the interim between the sessions being very highly prized and of vast service to the student. This opportunity is free to all matriculants.

The Faculty desire to state in this place that its diplomas are not purchasable. It would hardly seem creditable to the reputation of dentistry and of dental schools to be obliged to make this statement, but the frequent applications, made almost every year, for the diploma on other terms than actual attendance on the lectures, and a satisfactory exami-
nation at the close of the session, would indicate that this matter is not well understood.

The New College Building, into which this College was removed in June, 1881, is one of the finest structures in Baltimore City. Every part of this spacious and handsome building is devoted to College purposes, except the large stores on the ground floor.

The "Infirmary Hall" is a model for space, architectural beauty and convenience, and is handsomely furnished. Situated on the second story, it occupies one-half of this extensive floor, the remaining portion of the same floor being devoted to the extensive Museum of the institution, (which is a large and beautiful hall,) the "Extracting Room," hat and coat room, water closets, &c.

Immediately over the Infirmary is a large and handsome "Lecture Hall," capable of seating three hundred students. Opposite the Lecture Hall are the large halls devoted to "Laboratory" purposes, three in number, one of which is used exclusively for plaster work, furnace work, vulcanizing, &c.

The ceilings are some twenty feet high, with numerous windows corresponding in size, and the halls and rooms are furnished with beautiful chandeliers and gas fixtures. The entire building fronting on two wide streets, has every advantage of location for light, &c.

Wide stairways and corridors separate the principal halls, this fine structure having been erected without regard to cost.

The entire establishment is thorough and complete in all its appointments, and is one of the finest and best equipped college buildings in the world devoted exclusively to dental instruction.

This College is extending relief to many thousand charity patients every year. The inmates of the Baltimore Labor Manual School, Child's Nursery Hospital, Baltimore Orphan Asylum, St. Vincent's Orphan Asylum, the Boy's Home, the Aged Men's Home, the Aged Women's Home, St. James' Home for Boys, St. Joseph's House of Industry, St. Paul's School for Girls, the Christ Church Orphan Asylum, Bay View Asylum, Spring Grove Asylum, Maryland Penitentiary, Baltimore City Jail, and, in short, without further enumeration, the inmates of every charitable institution in the City of Baltimore and its vicinity, of every character and form of religious belief, are freely invited to avail themselves of the advantages of the Infirmary, and are there treated entirely without cost to the patient or to the institutions from which they come. All the institutions enumerated, and many others, now depend for treatment of those diseases which the dentist alone can alleviate or cure, upon the succor which the Infirmary of this College affords.

The Museum of the College is the growth of years, and is a large and rare collection of anatomical specimens. Plates and drawings and photographic prints of anatomical and physiological subjects, (which are freely used in illustrations of lectures,) are in great number, exceeding variety, and being constantly added to. The collection of dental morbid specimens is alone worth a visit to examine. A large number of beautiful pathological specimens have been recently added to the collection. The collections were commenced in 1839, and have continued without interruption until now; and owing to the many years this College has been in existence, the
supply of pathological and other specimens for illustrating the lectures and demonstrations is larger than in any other similar institution.

Located in a city of 500,000 inhabitants, the clinical material is abundant, thereby enabling the student to carefully prepare himself for future practice, and instilling a degree of confidence which experience can only impart. Special Lectures by eminent scientists are delivered during the session, in addition to the regular course, also Clinics by celebrated operators.

The number of patients daily visiting the Infirmary is very large. All such patients are operated on by the students, under the careful supervision of the Professors and Demonstrators.

Since the close of the session of 1881-82 this College has formed an alliance with the College of Physicians and Surgeons, by which the Students of the former can avail themselves of the extensive clinical facilities of the latter—unsurpassed in any institution in this State.

The Dental Class is at liberty to attend any or all of the Lectures, on Medicine and Surgery at the College of Physicians and Surgeons, where the clinical material is superabundant.

The Faculty of this school, however, are distinctly of the opinion that those students who do not propose to graduate in medicine had better devote their time to the close study of Dentistry, a proper knowledge of which can only be acquired by the closest attention to the Dental Infirmary and Laboratory.

The study of general medicine therefore, is, in our judgment, properly a post graduate course for dentists.

Graduates of this school can enter the graduating class of the College of Physicians and Surgeons, on satisfactory examinations upon the second year subjects of the three years Graded Course or if preferred they can take the second and third at the end of the session.

Owing to the change from a two to a three years course the graduating class of 1893 was necessarily a small one.

COURSE OF STUDY.

Dental Surgery and Operative Dentistry.—These chairs will embrace everything pertaining to Dental Surgery and operative Dentistry—including the construction and application of appliances for correcting irregularities of the teeth or dental arch; treatment of dislocation and fractures of the maxilla, &c.

The different fillings of teeth, in their various classifications, materials used, and methods of introducing the same, will be carefully explained and their relative importance clearly demonstrated. The different instruments used in Operative Dentistry, together with their formation, tempering, use, &c., will be carefully considered and fully discussed.

Clinical Dentistry.—The demonstrators, aided by the professors and clinical corps, will deliver Clinical Lectures at frequent stated terms during the session, and hold Clinics for practical instruction.
PATHOLOGY AND THERAPEUTICS.—The Lectures of this chair will comprise such principles of pathology and the practice of medicine as are essential to a knowledge of the pathological relations of the teeth to the other parts of the system, together with the symptoms, causes and treatment of all diseases which involve the dental structures, such as inflammatory action affecting the various tissues, diseases of dental pulp, periodontitis, alveolar abscess, dental exostosis, dental caries, necrosis, etc., etc., together with many other conditions which are of interest to the dental practitioner.

The lectures on Therapeutics will comprise a comprehensive classification of medicines employed in dental practice, with a careful explanation of their properties and therapeutic effects, whether applied locally or otherwise.

MECHANICAL DENTISTRY AND METALLURGY.—The professor of this chair will aim to lay down the general principles which underlie the science and art of Dental Prosthesis. The student will be carefully taught discrimination in the selection of materials and their skillful use. Whatever is useful will be fully and copiously dealt with, and things of doubtful utility carefully scrutinized. All methods of merit will be fully noticed, and the labors of inventors and others recognized. The course will combine aesthetic with simply useful mechanism.

The metallurgy of Dentistry and so much of chemistry as is fairly included in the working of metals, porcelain, &c., will be fully dealt with, and also the details of Laboratory work, with the history, structure, and properties of the materials with which the dental mechanist has to deal.

The lectures are fully demonstrated and illustrated, and cover the ground of gold and metal plates generally, continuous gum, and of the more commonly used and less costly materials, such as vulcanite and celluloid.

A complete series of demonstrations will illustrate the lectures on the art of preparing substitutes to supply the place of the natural organs, and adapting them to harmonize with the character and expression of the face.

In the Laboratory and Infirmary, ample opportunity will be given to each student to perform, under the daily supervision of the demonstrators, every operation in Mechanical Dentistry.

SPECIAL ANATOMY AND DENTAL MATERIA MEDICA.—The lecturer in this chair will present to the class the anatomy of the head and neck with special reference to all operations performed by the dental surgeon. Those medicines used in dental practice will be described and their various applications to diseases of the mouth indicated. An effort will be made to make these branches as practical as possible.

PHYSIOLOGY.—This course of Lectures will embrace microscopical anatomy, so that the physical character of organs and the physical principles involved in their action, may be fresh in the memory of the student at the time of description of their functions and their physiological relations. The physiology of the dental organs will be very distinctly set forth. Special attention will also be paid to the nervous system. Digestion, normal and abnormal, will be thoroughly investigated, and the importance of oral digestion clearly defined, as being the first step in that process upon
the perfection of which the remaining acts mainly depend. Special attention is paid to the microscopical anatomy of the dental structures.

CHEMISTRY.—It will be the aim of the professor of this chair to give an accurate knowledge of the principles of the science, dwelling especially upon those points which are of peculiar interest to the dental student. The physiological relations of chemistry will be unfolded as far as practicable, leaving particular details to the chair of physiology. Careful attention will be paid to the chemistry of Metals and all the Materials used in dentistry; also to the vital chemistry of anesthetics. The special chemistry of the mouth, the stomach and intestinal tube will be fully treated.

ANATOMY.—General anatomy will be thoroughly taught by this chair in the most careful manner. Models, plates and the cadaver are abundantly supplied for the proper illustration of this subject. Special attention will be given to the descriptive anatomy of the head, face and neck, which will also occupy the careful attention of the Professors of Special Anatomy and Physiology. Dissecting material will be supplied in abundance, and without cost.

ORAL SURGERY.—Clinical Lectures on Surgery will be given weekly by this chair, at the College of Physicians and Surgeons. Special attention will be paid to clinical operations in surgery upon the mouth and face. The College Dispensary furnishes an ample supply of material.

MATERIA MEDICA.—A complete course of Materia Medica and general therapeutics will be given by this chair, while special attention will be called to the nature and therapeutic uses of those drugs required in dentistry.

INFIRMARY PRACTICE.—The Faculty have spared no pains to make arrangements for the acquirement of practical skill, commensurate with the importance of this branch of tuition. The Infirmary is open during the entire year, and is adequately supplied with operating chairs.

The operative and mechanical departments are now so well patronized that every student can obtain as much practice as it is possible for him to attend to. With the exception of Sunday, four hours are daily spent by the student in actual practice, under the supervision of the demonstrators and the professors. To allow each one equal opportunity, and to put the theories taught into practice, at the commencement of the session, the students are divided into classes, which secures constant rotation through the operating and mechanical departments. The demonstrators are always present to give required information.

Under the direction of the demonstrators, patients will be assigned to the students, who will be required to operate at the chair, and they will in this way be taught the various operations incident to Dental Surgery.

This intimate union of theoretical and practical instruction will be insisted on during the entire course, and, indeed, is considered as the one thing essential to becoming a competent dental practitioner.

In the Laboratory each student has his desk and work bench assigned to him, where his instruments can be kept under lock and key. Students are required to make experimental as well as practical pieces of all materials in use. Each student is expected to provide his own instruments, with the exception of extracting forceps, lathes and vulcanizers. All expenses attending operations upon college patients are borne by the College.
It will be of interest to dental students to have their attention called to the fact that the Infirmary and Laboratory are open during the Spring, Summer and Fall, daily, and that this department of the College affords practice throughout the entire year. The benefits of a large infirmary practice to the dental student cannot be well over-estimated, as advantages are had which are entirely unobtainable in any private dental office. What students most feel their deficiency in, and most lack the opportunity of obtaining under a preceptor—the actual handling of instruments and of witnessing and attempting for themselves the filling of teeth—are here enjoyed in full. There is always abundant material for practice, and both Infirmary and Laboratory are well equipped with instruments and apparatus. The large and interesting Museum of the College is also open to the constant inspection of students, and the study of the many specimens of morbid anatomy cannot fail to be of essential service.

Ample opportunity in the dissecting rooms is afforded for the study of Practical Anatomy.

Weekly examinations are held by all the professors, as reviews of the lectures delivered during each week of the season.

The Infirmary, in the College building, is open to patients for dental operations during the entire year.

TERMS OF GRADUATION, STATUTES, &C.

In accordance with the resolutions adopted by the National Association of Dental Faculties at its last meeting, the Course of Study is divided into a Freshman, Junior and Senior term.

The qualifications for entering the Freshman class are: A preliminary examination in the ordinary English Studies.

A candidate who has received a collegiate degree, or passed the matriculate examination of a recognized college, or who has a certificate from a normal, high or grammar school, or a teacher's certificate, properly attested, may enter without examination.

The studies assigned to the Freshman term comprise Anatomy Physiology, Chemistry, Dental Materia Medica, Didactic and Practical Mechanical Dentistry and Operative Dentistry and Pathology and Therapeutics.

The course of studies for the Junior Term comprise a review of the Freshman Year Studies, Histology, Pathology, Materia Medica, Therapeutics, Mechanical and Operative Dentistry, Dissection, Chemistry, Physiology, General and Surgical Anatomy.

In the Senior Year the preceding studies will be continued with the addition of Surgery.

Students will be examined at the end of each session progressively—or in accordance with the demands made of them. Freshmen and Juniors, however, who fail in their examinations, will be accorded the privilege of a second examination at the commencement of the ensuing session.

Each candidate for graduation must present himself for examination before the faculty upon all subjects taught in the College. Prior to such
examination, he must show specimens of operations upon the natural organs, and present approved specimens of dental mechanism, constructed in the College; also, he must have attended three full winter courses of Lectures in this College.

The following, however, will be considered as equivalent to attendance on one or two courses of lectures: The same time spent in any reputable Dental College, prior to matriculation in this school.

Students who have attended but one course in a medical college will be admitted to the Second Year, subject to the rules governing examinations.

Graduates of recognized medical and pharmaceutical schools will be admitted to the Second Year class without examination.

All students, whether graduates of medicine or dental practitioners, are required to attend regularly upon lectures, demonstrations, and clinical duties, and be examined by each member of the Faculty. Degrees in absentia are not granted by this College.

Punctual attendance upon Lectures and other College duties, respect to instructors, and a strict observance of all rules, will be required of every student. Every student is required to operate in the Infirmary whenever called upon by the demonstrators, unless excused by a special vote of the Faculty. The seats in the Lecture room are numbered, and will be assigned on October 1st and thereafter to students who are present in the order of their matriculation.

The fees each session are $100, Demonstrators' Fees included; Matriculation Fee, $5, Diploma Fee, $30; Dissecting Tickets, $10; Graduation Expenses, $5. Recent graduates of other schools are admitted on paying the Matriculation Fee and $50—half the regular fees. Graduates of more than three years' standing, the Matriculation Fee only. These fees, with the exception of the Diploma fee, must be paid on matriculating. All tickets will be issued by the Dean, to whom students are requested to report themselves immediately upon their arrival in the city. By leaving baggage at railway depot until a boarding house is secured, hotel bills can be saved.

The Faculty of this College have never made any extra charge for preparing students for examination and have always freely given their services for such purpose.

Beneficiary.—A beneficiary student will be received from each State on the recommendation of the State Dental Society, on the payment of half the tuition fees.

All Beneficiary Certificates must be presented to the Dean, before the commencement of the session at which they are to be used.

Board may be obtained at from $3.50 to $5 per week, at private boarding-houses, the quality and terms of which are as good and cheaper than in any other large city.

Several lines of splendid steamships come direct from the principal European ports to Baltimore.

Text books.—Taft's Operative Dentistry; Guilford's work on Irregularities; G. M. Evans' work on Bridge and Crown work; Richardson's Mechanical Dentistry; Wedd's Pathology, Martin's Physiology; Gray's Anatomy; Bryant's Surgery; Tomes' Dental Anatomy; Woods' Materia Medica; Simon's Chemistry; Dunglison's Medical Dictionary.
WORKS OF REFERENCE.—Tomes’ Dental Surgery; Kingsley’s Oral Deformities; Farrar on Irregularities; American System of Dentistry; Avery’s or Mitchell’s Chemistry; Stocken’s Dental Materia Medica.

The amount of money (about $50 per session) paid for books and instruments is a permanent investment lasting for life. It is impossible to practice dentistry without them. This expense is one that all practicing dentists must incur and the sooner the student has the requisite number the better for him. Some gentlemen manage to go through college with a very limited supply. This is poor economy, as they should become thoroughly accustomed to handling all the necessary instruments during their collegiate course. It is much better when possible, to make these purchases during their first session. The College furnishes extracting forceps vulcanizers and lathes.

Prizes.—Several prizes will be awarded at the close of the session, among which will be a First Honor Medal, given by faculty; Dental Engine and set of Varney’s pluggers from S. S. White; a set of Extracting Forceps, from Snowden & Cowman; a Medal from Jas. Hart.

The Infirmary in the College building is open during the entire year for dental operations, and students can enter at any time by paying $50, which is deducted from the fees of the succeeding regular winter course.

Alumni of the College who are permanently settled and other dental practitioners, who desire to receive the Annual Catalogue regularly, are respectfully requested to send names and addresses to the Dean. The Catalogue is published each year at the close of the session, and contains Course of Study, Terms, &c., and names of all the Graduates of the College.

Students corresponding with the Dean will please be careful to give full address, and direct their letter to

Prof. R. B. Winder,
Dean of Baltimore College of Dental Surgery,
No. 716 Park Avenue, Baltimore, Md.

POST GRADUATES.

Hafke, A., D. D. S. ........................................ Germany.
Parker, E. W., D. D. S. ...................................... Virginia.

SUMMARY.

Students of Senior Class .................................. 22
" " Junior " .................................................. 45
" " Freshman Class .......................................... 59
Post Graduates ................................................ 3

CLASS HONORS.

Diamond Medal—Milton S. Merchant, grading 59 out of a possible 60.
Gold Medals—G. A. Hahn and Luther M. Parsons, respectively 54½

HONORABLE MENTION.

W. H. Gregg, 54.  
Francis H. Mulholland, 53¼.
Erwin S. Rinehart, 53.
Joseph Krainik, 52¼.

Operative Prize—Joseph Krainik.
Very Honorable Mention—J. W. Thompson.
Mechanical Prize—Joseph Krainik.
Bridge Work Prize—Harry C. Griffith.
Essay on Orthodontia—Harry C. Griffith.

First Honor, Medal; given by Faculty.
Second Honor, Medal; given by James Hart.
Operative Prize, Set of Forceps; given by Snowden & Cowman.
Bridge Work Prize, Set of Varney Pluggers; given by S. S. White Dental Manufacturing Company.
Mechanical Prize, Dental Engine; given by S. S. White Dental Manufacturing Company.
Essay on Orthodontia, Farrar on Irregularities; given by J. N. Farrar, of New York.
REGULAR GRADUATES.
