

## **Data In Data Out: Failure of EHR Input in Research Output**

Alicia LePard, PhD, MBA, ACNP-BC, ENP-C, FNP-BC, GNP-BC, FAANP

### **Abstract**

Value of the cohesive patient clinical use of a multi-system EHR should facilitate research on a longitudinal platform for chronic care evaluation and management, identification of treatment strategies and improvements. Yet, the lack of standardization of nomenclature and continued use of free text fields in episodic manner inhibits useful data output as evidenced in, Characteristics and Signs in Nontraditional Glycemia: Atypical Insulin Resistance - Type 2 Diabetes.
