Richard Dalby, PhD, a professor in the Department of Pharmaceutical Sciences (PSC), has been on faculty at the School of Pharmacy since 1992. He has chaired many of the School's standing committees, has served as vice chair of PSC, and has twice been director of that department's graduate program.

Dalby has long been recognized as an innovator in education from his leadership role in the development and implementation of several required and elective courses, to his teaching awards, which include School of Pharmacy Teacher of the Year and Distinguished Educator of the Year. His teaching and course management approach is grounded in practicality, inclusion of expert instructors across disciplines, and the creation of course management systems that endure beyond his tenure in a given position or class.

In addition to his excellence in teaching, Dalby is an internationally recognized researcher and industry consultant in the area of nasal and pulmonary drug delivery systems. His most recent research achievements include the development of techniques to evaluate nasal spray bioequivalence, enhance drug delivery to the respiratory tract, and elucidate powder-emptying mechanisms from dry powder inhalers using physiologically justified inhalation conditions. His papers, books, patents, funding, and student placement reflect his interest in patient-relevant testing of new and existing drug products. He has co-organized the Inhalation Aerosol Technology Workshop at the School of Pharmacy that has attracted hundreds of attendees to the School since 1993. He is a fellow of the American Association of Pharmaceutical Scientists.

Founded in 1841, the University of Maryland School of Pharmacy is the fourth oldest school of pharmacy in the nation. The School is a thriving center for professional and graduate education, pharmaceutical care, research, and community service. Ranking ninth in the nation, the School strives to improve the health and well-being of society by aiding in the discovery, development, and use of medicines. The School's PharmD program expanded to the Universities at Shady Grove in Montgomery County in the fall of 2007, and construction is in the final phases on a \$67 million, seven-story building adjacent to the School's Pharmacy Hall.
