Informatics

Who Should Attend?

The 15th Annual Summer Institute in Nursing Informatics will focus on identifying and overcoming the many and varied challenges that are arising in the fast-paced arena of healthcare information. Whether or not you consider yourself an informatician, it is clear that you will be consistently confronted with the need to have a comprehensive working knowledge of this field.

- Nurse managers and executives select and implement systems that are appropriate to their environment
- Administrators and supervisors use decision support systems to facilitate care giving systems
- Clinicians must use technology in direct patient care and for documentation
- Researchers, educators and students demand an awareness of cutting edge advancements

This is a dynamic, rapidly changing facet of healthcare – and this is the premier and largest nursing informatics conference in the nation. You can't afford to miss it.

> *"The Institute reflects what is current in the informatics world as it pertains to nurses and patient care. I always learn something new from the educational, vendor, and networking events."*
>
> *–Susan K Newbold, MS, RNBC, FAAN, FHIMSS*

Sponsorship and Exhibitor Opportunities

We welcome the partnership of appropriate sponsors and exhibitors. Exhibitors will be able to showcase innovative services, hardware and software products for participants, presenters, and faculty. For more information, please visit our Web site or call **410–706–4122.**

Overview

International presenters and leaders in the field of informatics will present seminars and workshops that are didactic as well as interactive. You will see examples of informatics in practice and learn how technology influences our patients, colleagues, institutions, and your future. In addition, you will have the opportunity to network with leaders, researchers, and colleagues in this field, attend how-to sessions on informatics processes, and observe software demonstrations.

New This Year! Specially designed tracks that will address the components of our theme: People, Process & Technology.

- Novice to Intermediate Track - Sessions will be provided for those of you who are new to the field of informatics and would like clear, concise, and basic introductions to a variety of "hot" topics.
- Advanced Track − For those of you who are the "pioneers" and experts in this field, you will have the opportunity to attend scholarly sessions with industry and educational leaders who will take you to the next level in your knowledge and your profession.

"Of all the conferences that I have the opportunity to attend, I continue to choose this program year after year and always find sessions that are timely, innovative, and appropriate for my professional needs."

–Jason Windsor, RN, CEN

Call for Abstracts

More than $20,000 Now Available in Scholarships and Cash Awards
Please submit abstracts for paper and poster presentations related to informatics research, innovative informatics applications, and/or demonstrations that address the theme*, Breaking Through the Barriers of Healthcare Informatics: People, Process, & Technology.* **Due by March 31.** Guidelines, forms, and applications can be found on the Summer Institute Web site. Please submit abstracts electronically to informatics@son.umaryland.edu
