

mHealth: Report of the NI2014 Post Conference on Mobile Health

Susan Newbold, PhD, RN-BC, FAAN, FHIMSS, CHTS-CP

The presentation will be a report of the NI2014 Post Conference on Mobile Health. The discussion will include recommendations, guidelines, and tools and courses relating to the use of mobile technology to improve patient care around the globe. The Nursing Informatics 2014 (NI2014) post conference included informatics nurses, practitioners, and researchers from around the world. They gathered to focus on new care models in mobile health (mHealth). The presenter led the group in testing a framework developed by the Healthcare Management and Systems Society (HIMSS). The aspects of this framework include:

- New care models
- Technology
- Return on investment and payments
- Policy
- Privacy and security
- Standards and interoperability.

The presentation also summarizes some recent research and development related to mHealth. A number of the participants have implemented mobile technology and provided case studies highlighting their work. Some have conducted and published research specifically in the area of mobile health.
