Faculty of the College.

Provost.

ELEAZAR PARMLY, M. D.

No. 1 Bond Street, New York.

Professor of Principles and Practice of Dental Surgery.

CHAPIN A. HARRIS, A. M., M. D.

N. E. Corner of Charles and Lexington Streets, Baltimore.

Professor of Special Pathology and Therapeutics.

THOMAS E. BOND, JR., A. M., M. D.

No. 186 West Lombard Street, Baltimore.

Professor of Anatomy and Physiology.

WASHINGTON R. HANDY, M. D.

No. 52 East Pratt Street, Baltimore.

Professor of Operative and Mechanical Dentistry.

CYRENIUS O. CONE, M. D., D. D. S.

No. 38 North Charles Street, Baltimore.

Lecturer on Dental Chemistry and Demonstrator of Mechanical Dentistry.

PHILIP H. AUSTEN, A. M., M. D.

No. 38 North Charles Street, Baltimore.

BALTIMORE COLLEGE OF DENTAL SURGERY.

THE Faculty of the Baltimore College of Dental Surgery have the honor to present their Eleventh Annual Announcement to the Profession and the Public.

It becomes them to acknowledge the continual and increasing interest taken by many of the most skilful and scientific dentists in the country in the progress of the Institution—an interest manifested by many acts of kindness and attended by a gradual and steady increase of pupils.

They are also happy to acknowledge their indebtedness to the editors of medical journals for the repeated commendatory notices of the Institution, and they take this opportunity to return their sincere thanks to the distinguished gentlemen, physicians and dentists, who have come from other States and many of them from long distances, to participate in the examination of pupils for degrees and in the ceremonies of the Commencement.

The Faculty hope by untiring efforts to merit the favor of all who are capable of appreciating the importance of systematic instruction in Dental Surgery to the profession and to the public.

Though the classes have steadily increased, they are by no means as large as the Faculty had reason to expect. They comprise as yet but a small proportion of those who are in preparation for dental practice. Many preceptors are indifferent to the success of the collegiate scheme, and many more are entirely hostile to it. If students can be persuaded that they can obtain sufficient information by remaining a few months in the office of a dentist, they will rarely incur the expense and labor of college education; and unfortunately there are many, and among them

those least capable of teaching, who are always ready to undertake the training of the pupil upon the terms most likely to be acceptable to himself. The Faculty have knowledge that, in some instances, young men who have been sent to the school by their parents or guardians, have been induced to go into the office of practitioners of low standing, who have promised to give them all necessary instruction in a few months, and for a paltry sum. The consequence has been as might have been expected. No instruction was given; and the money intended for college expenses has been wasted in dissipation.

The Faculty feel the great importance of office instruction as an adjunct to college teaching, but they are assured that the great end of elevating Dentistry to the dignity of a speciality of Medicine and Surgery can never be attained without a union of the two means of education.

The plan of the college is as heretofore. The mode of teaching is as practical as possible. The mechanical, the operative, the theoretical and the correlative branches are all taught fully and efficiently.

That the design of the Institution may be more fully answered, and the expectations of the profession realized, the final examination of candidates for graduation will be conducted by a Committee of Physicians and Dentists, not connected with the Institution: whose duty it shall be, after a rigid examination, to pronounce upon the fitness of each candidate to practice under the degree of DOCTOR OF DENTAL SURGERY.

The Committee for the ensuing year will be

Dentists.

DANIEL HARWOOD, M. D., *Boston, Mass.*

JOHN A. CLEAVELAND, D. D. S., *Charleston, S. C.*

N. A. FISHER, M. D., *Providence, R. I.*

N. CLUTE, " *Louisville, Ky.*

Physicians.

GEORGE C. M. ROBERTS, M. D., *Baltimore.*

RICHARD STEWART, " "

WM. W. DAVIS, " "

There exists abundant opportunity for practical instruction in the Dental Infirmary attached to the Institution. The appreciation and consequent demand of such operations as are here performed, is steadily increasing among the indigent of our city. It may be necessary to add, that these operations are not performed by the Professors in the presence of the class, but by the Students themselves, under the immediate eye and direction of their instructors. These opportunities for practice are not confined to two or three days in each week, but take place daily throughout the session. In fine, the object of the Institution is to perfect the professional education of the Dentist, which may or may not have been begun under some competent private instructor; and which, it is recommended, should be pursued during the summer vacation in some Dental office.

The Infirmary, together with the Dissecting and Mechanical rooms, will be opened on the *last Monday in October* for instruction in Practical Anatomy and in Operative and Mechanical Dentistry, by the Professors in their respective departments, and the Demonstrator of Mechanical Dentistry. The Faculty would earnestly recommend all Students to avail themselves of this month's practical instruction. The regular course of Lectures will commence on the *last Monday of November*, and close the *last of March*.

All Students will be required to present to the Dean the tickets for the full course before they enter the Institution. Want of punctuality in attendance on Lectures and Demonstrations, disrespect to any member of the Faculty, disorderly conduct in the college, or gross immorality, shall be deemed sufficient ground for the dismissal of a Student and forfeiture of his fees.

The rooms of the College will be closed on Sunday, and no work whatever will be allowed during the week after 7 o'clock, P. M.

Any of the Professors will cheerfully give advice and assistance in the selection of a boarding house, if application be made to them personally or by letter.

Plan of Instruction.

The plan of instruction comprises four Professorships and one Lectureship.

- 1st. Principles and Practice of Dental Surgery.
- 2nd. Special Pathology and Therapeutics.
- 3rd. Anatomy and Physiology.
- 4th. Operative and Mechanical Dentistry.
- 5th. Dental Chemistry.

Principles and Practice of Dental Surgery.

The Professor of this department will deliver a *complete* course of lectures upon the Principles and Practice of Dental Surgery—in which will be embraced, Dental Anatomy, Physiology, Pathology and Therapeutics, illustrating the science with numerous specimens of healthy and morbid Dental Anatomy, and weekly clinics in the Infirmary of the College. Lectures on Dental Hygiene will also be given from this chair.

Special Pathology and Therapeutics.

The Professor teaches the General Principles of Pathology, Medicine and Surgery. He dwells particularly upon such diseases, as complicate disorders of the mouth, face, &c., &c.

Anatomy and Physiology.

The Professor commences by familiarizing the Student with the alphabet, or general principles of Anatomy, called General Anatomy; then, upon the subject, he has the different parts dissected, demonstrating minutely those of the head and neck. The healthy action of the several organs concerned in any particular function is shown with the structure, thus uniting the Physiology with the Anatomy, and blending relations which nature has made inseparable, presenting a plan of instruction found to be most interesting and useful. Besides the fresh subject, various preparations, dry and wet, with models, drawings, &c. &c. are used in the different illustrations. The Dissecting Room is under the personal direction of the Professor.

In addition to the usual course, the Surgical operations of the head and neck will receive especial attention, and will be performed in the presence of the class.

Operative and Mechanical Dentistry.

The Professor of this department, gives his special attention to all the various details belonging to these branches, which will be illustrated by plates, and mechanical specimens in the various stages of completion, and also, by operations on the living organs. The subject of the lectures given in this department will be directly applied to practice in the Infirmary, by each individual member of the class being taught not only the use and application of instruments in operations on the living subject, but is forced to exercise his judgment in the treatment of cases, demonstrating to the Professor the correctness of the same by scientific reasoning.

Mechanical Demonstrations.

Practical Demonstrations will be given daily in the Mechanical Rooms, calculated to prepare the attentive and industrious Student for any exigency that may arise in the practice of this department of his profession.

TERMS OF GRADUATION.

“Candidates for graduation, who have attended two full courses of lectures in this college, or one course in some respectable Medical or Dental College, and one in this Institution, will be subjected to a critical examination by the Faculty and Examining Committee, and be required to defend a thesis on some subject connected with Dental Science; they will also be required to present one or more specimens of mechanical skill in preparing and setting artificial teeth, and likewise be expected to perform certain dental operations in evidence of practical qualifications; and on being found competent, they shall receive

the degree of '*Doctor of Dental Surgery.*'" Written evidence of four years' actual practice in the Dental Art will be considered equivalent to one course of Lectures.

TERMS OF ADMISSION.

Tickets for the Course, \$110; Dissecting Ticket, optional, \$10; Diploma Fee, \$30; Matriculation, \$5. Students are expected to take the tickets on entering the Institution, when a table will be assigned to each in the Mechanical Room, and a position in the Infirmary classes.

Good and respectable board can be obtained at from \$2 50 to \$4 00 per week.

Lectures begin the last Monday of November, and end the last of March; the Mechanical and Dissecting Rooms open last Monday of October. All perishable articles used in the laboratory by the pupils, must be provided by them; nothing but permanent fixtures furnished by the College.

Students who have instruments, &c. would do well to bring them, as they would be enabled to acquire, in the Infirmary practice, a familiarity with their use that would tend to remove embarrassment in entering on practice, after leaving the College.

GRADUATES OF THE BALTIMORE COLLEGE OF DENTAL SURGERY.

1. ROBERT ARTHUR, *District of Columbia.*
2. R. COVINGTON MACKALL, *Maryland.*
3. WM. W. H. THACKSTON, *Virginia.*
4. JOSEPH B. SAVIER, *Virginia.*
5. W. R. SCOTT, *North Carolina.*
6. CHARLES HARRIS, *Virginia.*
7. JOHN W. FOSTER, *Virginia.*
