

BALTIMORE COLLEGE
OF DENTAL SURGERY

37th

ANNUAL CATALOGUE

1876-1877

THIRTY-SEVENTH
ANNUAL CATALOGUE

OF THE

BALTIMORE

College of Dental Surgery,

The Oldest and for many years the only Dental College in the World.

1876.

CHARTERED IN 1839,

By an Act of the Legislature of the State of Maryland.

BALTIMORE, MD.

THE
Baltimore College of Dental Surgery

FACULTY:

FERDINAND J. S. GORGAS, A. M., M. D., D. D. S.,
Professor of Dental Science, Surgery and Therapeutics.

HENRY REGINAL NOEL, M. D.,
Professor of Physiology and Pathology.

E. LLOYD HOWARD, A. M., M. D.,
Professor of Chemistry and Materia Medica.

JAMES H. HARRIS, M. D., D. D. S.,
Professor of Clinical Dentistry,

JAMES B. HODGKIN, D. D. S.,
Professor of Dental Mechanism and Metallurgy.

THOMAS S. LATIMER, M. D.,
Professor of Anatomy.

JUDSON B. WOOD, M. D., D. D. S.,
Demonstrator of Operative Dentistry.

BASIL M. WILKERSON, M. D., D. D. S.,
Demonstrator of Mechanical Dentistry.

JOHN C. UHLER, D. D. S., M. D.,
EDWARD F. WAYMAN, D. D. S., M. D.,
FRANK S. LEWIS, D. D. S.,
Assistant Demonstrators.

CHARLES F. BEVAN, M. D.,
Demonstrator of Anatomy.

F. J. S. GORGAS, D. D. S., M. D., Dean,
No. 259 N. Eutaw Street, Baltimore, Md.

Session 1876-'77.

THE THIRTY-SEVENTH Annual Course of Lectures of the Baltimore College of Dental Surgery, will begin on Monday, October 16th, 1876, and will continue until March, 1877.

The first two weeks of the Session are devoted to Infirmary Practice, Clinics and Preliminary Lectures, the Regular Lectures beginning on the first day of November, 1876.

The Faculty of the Baltimore College, which is the oldest and best known dental school in the world, feel justified in appealing to its Alumni who are resident in every part of the civilized world to show by their good will and patronage their appreciation of the efforts that are constantly being made to keep the Baltimore College in the foremost rank of Dental Schools. This School being the first instituted can refer with pride and honor to the reputation and standing of its Alumni in every organization of importance which has been developed in the history of Dental Surgery since it became a science.

After nearly forty years of persistent labor the Faculty are able to report that the civilized world has adopted the proposition of the Maryland Legislature, and that now Scientific Dentistry is an admitted branch of Surgery, while *American* Dentistry, is in Europe, synonymous with the Scientific. The Baltimore College has graduated nearly 800 students; of these some are now successfully practicing in the capitals and great cities of Europe. The Baltimore College is represented in this way, in London, Paris, Madrid, Barcelona, Florence, Rome, Berlin, Vienna, St. Petersburg, &c.; also, in several of the West India Islands, and in the cities of South America. Every year Europeans come to this country to be educated in Dentistry. It is the highest testimony to the character and usefulness of the Baltimore College, that at present, and as far as we know, without exception, all the court dentists in Europe are graduates of this school.

The diploma of the Baltimore College is held in such high esteem, that large sums of money have from time to time been offered for it by dental practitioners residing in foreign countries, who desire the honor as a pecuniary benefit, without regard to qualification. It is scarcely necessary to say that the Diploma of this College cannot be purchased.

As an evidence of the desire of the Faculty to do every thing in their power to advance the interests of the science, and not only to maintain, but also to elevate the status of this Institution, they take pleasure in announcing that it now occupies the most elegant and best arranged building devoted to dental instruction, in the world, which was completed for this purpose in February, 1875.

This NEW College Building is a very handsome four story structure with Mansard roof, situated on the South-East Corner of Eutaw and Lexington Streets, one of the best locations in the City of Baltimore for convenience and Infirmary Practice, with large windows extending from the ceilings to very near the floors.

The superior size and arrangement of the New College Building enables the Faculty greatly to enlarge their plan and means of instruction. Central in location, its rooms are large and well ventilated, furnished with gas, abundantly supplied with water, and provided with every convenience necessary to the comfort of the student.

The Museum of the College contains a large collection of natural and morbid specimens, interesting to the dental student, and is not surpassed by that of any institution of the kind in the world. A large number of beautiful pathological specimens have recently been added to the collection.

The Faculty feel assured that the course of study and requirements, as well as the result of the examinations, will convince all honest minds, that this, the oldest Dental College still maintains its world-wide reputation; and while it is far superior to many of recent growth, is second to none in this or any other country.

The Alumni and all interested in dental education, are very cordially invited to be present, not only at the Commencement Exercises, but during the final examination of the candidates for graduation, which takes place during the week preceding the Annual Commencement.

The plan of instruction is designed to be, in every respect *thoroughly practical*, using all available means to secure a complete

course of instruction in the practice as well as in the theory of dentistry.

The absolute necessity for ACTUAL PRACTICE as an element of instruction, is not lost sight of in the effort to impart the knowledge necessary for the guidance of the dentist. In acknowledgment of the importance of this branch of tuition, the Faculty will continue to give special attention to the organization of the Practical Department which affords more and better advantages than any private office.

In the plan of instruction CLINICAL Teaching also has a most important place assigned to it and while careful attention is given to the elementary and theoretical subjects, the great advantages of Clinical demonstrations in both Operative and Mechanical Dentistry possessed by the Baltimore College, enable the Faculty to commend it in an especial manner to those who are seeking a practical knowledge of dentistry before engaging in the active duties of professional life.

Graduates of the Baltimore College are received as second course students at the College of Physicians and Surgeons, and the medical school of the Washington University.

COURSE OF STUDY.

The science is divided into a number of departments, each of which is presided over by a Professor, qualified by many years experience in teaching.

DENTAL SCIENCE, SURGERY AND THERAPEUTICS.—The lectures of this chair will comprise all the practical details connected with the etiology, pathology and treatment of the morbid conditions and structural changes of the teeth, gums, alveolar processes and maxillary sinus; the nature, prevention and treatment of salivary accretions, of exposed and diseased nervous pulp; extraction of teeth, and the use of anæsthetic agents for dental operations; materials used in filling teeth, such as plain and adhesive gold foil, crystal and plastic gold, &c., and the various methods of

introducing the same; form, manner of using, and the art of tempering instruments; correction of irregularities of the dental arch; dental hygiene, &c. Also, the pathology, diagnosis, and treatment of those diseases which involve the structures of the mouth and adjacent parts, and the local effect upon these organs of general, constitutional and hereditary disease. All the prominent articles of the *Materia Medica* will be accurately described, illustrated by specimens and botanical plates, and accompanied by their appropriate therapeutical indications.

PHYSIOLOGY AND PATHOLOGY.—The course of lectures will embrace Anatomy—general, comparative and microscopical, so that the physical character of organs, and the physical principles involved in their action, may be fresh in the memory of the student at the time of description of their functions and their physiological relations. The physiology of the dental organs will be very distinctly set forth. Special attention will also be paid to the nervous system. Digestion, normal and abnormal, will be thoroughly investigated, and the importance of oral digestion clearly defined, as being the first step in that process, upon the perfection of which the remaining acts mainly depend. Lectures will be given on Hygiene and Dietetics. Special attention is paid to the Microscopical Anatomy of the Dental Structures, and the principles of General Pathology.

ANATOMY.—This science will be treated in its application to Dental Surgery. Its sub-divisions, microscopical and comparative, will receive appropriate attention, together with the chief object of the course—the study of Human Regional Anatomy. Thus a general survey of the subject will be taken, sufficient to enable the student to acquire a comprehensive knowledge of the science, and will embrace a systematic course of lectures on Descriptive and Surgical Anatomy, fully illustrated by dissections on the *cadaver*, preparations, models, drawings and other adjuncts.

The minute anatomy of the various organs and tissues of the body will be shown by the microscope, and particular attention will be given to the demonstration of the anatomy of the head and face. Convenient and well arranged dissecting rooms afford ample opportunity for the study of Practical Anatomy, of which it is hoped every student will avail himself.

CHEMISTRY AND MATERIA MEDICA.—It will be the aim of the Professor of this chair to give an accurate knowledge of the principles of the science, dwelling especially upon those points which

are of peculiar interest to the dental student. The physiological relations of chemistry will be unfolded as far as practicable, leaving particular details to the chair of Physiology. Careful attention will be paid to the chemistry of metals, and all the materials used in dentistry; also to the vital chemistry of anæsthetics. The special chemistry of the mouth, the stomach and intestinal tube will be fully treated. The prominent articles of the *Materia Medica*, especially such as are used in dental practice, will also be accurately described.

CLINICAL DENTISTRY.—The Professor of this chair will deliver clinical lectures at stated times each week of the session, and hold clinics for practical instruction. All known methods of performing operations, on the teeth and tissues involved, will be demonstrated at regular clinics, and every available means used to make the student practically competent to practice his profession.

The different preparations of gold will be manipulated, and the use of all the new appliances demonstrated.

MECHANICAL DENTISTRY AND METALLURGY.—The Professor of this chair will give a detailed description of the materials and processes employed in the construction of all varieties of dental appliances. The student will be instructed in all the rules of art and principles of science necessary to guide him to a judicious and intelligent choice of the many methods presented to his consideration. All discoveries and inventions will be impartially discussed, and to every originator of a valuable improvement due credit will be given.

A complete series of demonstrations will illustrate the lectures on the art of preparing substitutes to supply the place of the natural organs, and adapting them in harmony with the character and expression of the face. The mechanical contrivances for the correction of irregularities of the teeth, and other deformities of the buccal cavity, such as obturators, artificial palates, etc., will also meet with proper attention.

In the Laboratory and Infirmary, ample opportunity will be given to each student to perform, under the daily supervision of the Demonstrators, every operation in Mechanical Dentistry.

INFIRMARY PRACTICE.—The Faculty have spared no pains to make arrangements for the requirement of practical skill commensurate with the importance of this branch of tuition. The Infirmary is open during the entire year, and the number of operating chairs is as great as the large room will contain.

The Operative and Mechanical departments are now so well patronized that every student can obtain as much practice as it is possible for him to attend to. With the exception of Sunday, four hours are daily spent by the student in actual practice under the supervision of the Demonstrators and the Professors. To allow each one equal opportunity, and to put the theories taught into practice, at the commencement of the session the students are divided into classes which secure constant rotation through the operating and mechanical departments. The Demonstrators are always present to give required information.

In the Laboratory each student has his desk and work-bench assigned to him, where his instruments can be kept under lock and key. Students are also required to make experimental as well as practical pieces of all materials in use. Each student is expected to provide his own instruments with the exception of extracting forceps, lathes, and vulcanizers. All expenses attending operations upon College patients are borne by the College.

It will be of interest to dental students to have their attention called to the fact that the New Infirmary and Laboratory will be open during the Spring, Summer and Fall, daily, and that this department of the College will afford practice throughout the entire year. The Infirmary and Laboratory during the spring and summer, and until the Regular Session commences, is in charge of the Professor of Dental Mechanism and Metallurgy, whose daily attention and presence will be of inestimable benefit to students, and who will in person demonstrate all subjects connected with actual practice. The benefits of a large Infirmary Practice to the dental student cannot be well over-estimated, as advantages are had which are entirely unobtainable in any private dental office. What students most feel their deficiency in, and most lack the opportunity of obtaining under a preceptor, the actual handling of instruments, and of witnessing and attempting for themselves the filling of teeth, are here enjoyed in full. There is always abundant material for practice, and both Infirmary and Laboratory are well equipped with instruments and apparatus. The large and interesting Museum of the College is also open to the constant inspection of students, and a study of the many specimens of morbid anatomy cannot fail to be of essential service.

An invitation is extended to all who wish to see the advantages of this system of instruction, to visit the College and compare it if they desire with institutions of like character in other cities.

Weekly examinations are held by all the Professors, as reviews of the Lectures delivered during each week of the session.

THE INFIRMARY, in the New College Building, is open to patients for dental operations during the entire year.

TERMS OF GRADUATION, STATUTES, &c.

Each candidate for graduation must present himself for examination before the Faculty upon all subjects taught in the College. Prior to such examination he must prepare a written thesis, describing operations upon the teeth, such as the history, symptoms and treatment of special diseases of these organs, show specimens of operations upon the natural organs, and present an approved specimen of dental mechanism constructed in the College; also, he must have attended two full course of lectures in this College.

The following, however, will be accepted as equivalent to one course in this College:— One course in any reputable Dental College. Attendance and graduation in a reputable Medical College prior to matriculation at this College, and one year's Dental pupilage. Five years' Dental Practice, including regular pupilage. An acceptable examination on entering College, before the full Faculty in session, upon Anatomy, Physiology, Inorganic Chemistry and Practical Dentistry, including a regular course of pupilage and two years' actual practice. Certificates will be required as to length of pupilage and practice. The student meeting either of the above requirements will have the privilege of presenting himself as a candidate for graduation at the end of but one course of lectures.

All students, whether graduates of medicine or dental practitioners, are required to attend regularly upon all lectures, demonstrations, and clinical duties, and be examined by each member of the Faculty.

Punctual attendance upon lectures and other College duties, respect to instructors, and a strict observance of all rules, will be required of every student. Every student is required to operate

in the Infirmary and whenever called upon by the Demonstrators, unless excused by a special vote of the Faculty.

The fees each regular session are \$120, Demonstrators' Fees included; Matriculation Fee (paid only once) \$5; Diploma Fee, for candidates for graduation, \$30; Dissecting Ticket optional. *These fees, with the exception of the diploma fee, are expected to be paid on matriculating.* A spring session (optional) commences in March of each year and ends 1st of June following. Fees for Spring Session \$50. All tickets will be issued by the DEAN, to whom students are requested to report themselves immediately upon their arrival in the city. By leaving baggage at the railway depot until a boarding house is secured, hotel bills will be saved.

From the fact that the Baltimore College furnishes all the material used for practice upon Infirmary patients, and the price of board lower in Baltimore at this time than in any other large city, the expenses are no greater (if as great) than at any other Dental College.

BOARD may be obtained at from *four to six* dollars per week, according to quality. Students board at private boarding houses, the quality and terms of which are as good and reasonable as in any other city.

ALL THE INSTRUMENTS AND TOOLS required can be procured for from \$15, or \$20 to \$25, and are useful in after practice.

TEXT BOOKS.—Harris' Principles and Practice of Dental Surgery, 10th edition; Biddle's Materia Medica; Gray's Wilson's or Handy's Anatomy; Dalton's or Draper's Physiology; Fowne's Chemistry; Harris' Medical and Dental Dictionary, 3rd edition.

WORKS OF REFERENCE.—Tome's Dental Surgery, Taft's Operative Dentistry, Richardson's Mechanical Dentistry, Garretson's Oral Surgery of the Mouth and Jaws. Miller's Surgery, Heath on Injuries and Diseases of the Jaws, Piggott's Dental Chemistry.

THE TEXT BOOKS.—Can be procured for from \$25 to \$30.

None but *White Students* are allowed to matriculate at this College.

Students corresponding with the Dean will please be careful to direct their letters to

F. J. S. GORGAS, M. D.,
DEAN OF BALTIMORE COLLEGE OF DENTAL SURGERY,
No. 259 North Eutaw Street, Baltimore, Md.
